

AMOXYCILLIN-400

Broad spectrum Antibiotic Tablets

Composition:

Each tablet contains:
400mg Amoxicillin as amoxicillin trihydrate.

Action:

Amoxicillin-400 is a broad spectrum semi-synthetic β lactam antibiotic that blocks the bacterial cell wall mucopeptide. Absorption is not affected by the presence of food and amoxicillin is not inactivated by gastric acid.

Indications:

For the treatment of infections caused by amoxicillin susceptible organisms in dogs and in cats.

Contraindications:

Do not administer to small herbivores or animals with a history of allergic reactions to penicillins.

Dosage:

4 – 11mg/kg bw twice daily until 48 hours after symptoms have subsided.

Tablet easily divided to accommodate 50mg and 100mg doses for cats and small dogs.

Side Effects:

If allergic reactions occur use adrenalin or steroids.

Packaging:

500 tablets per bottle.

Registered pursuant to the ACVM Act 1997,
NoA7707
