

EQUIDINE SPRAY

The germicidal power of Povidone-Iodine, "Tamed-Iodine", in action

Equidine Spray:

(10% Povidone Iodine)
Equidine Spray is formulated with PVP Iodine as a powerful antiseptic.

Properties:

Povidone-Iodine is a water-soluble complex of iodine and polyvinylpyrrolidone used for its general antiseptic properties.

Povidone-Iodine retains the antimicrobial spectrum of iodine without the disadvantages of staining, irritation or toxicity. It is "tamed iodine".

On contact, iodine is released to diffuse into micro-organisms where it interferes with their vital metabolic processes, killing them rapidly.

Activity:

The Povidone-Iodine in Equidine is effective against bacteria, fungi and viruses within one minute. Bacterial spores are killed within 15 minutes. The germicidal activity is maintained even in the presence of blood, serum, pus and soap.

Povidone-Iodine may be left in contact with tissue for long periods without ill effect. It may even be used underneath bandages.

Safety:

Equidine Povidone-Iodine is non irritant and non-staining. During skin exposure tests on animals and humans, no adverse reactions have been observed.

Products:

The Equidine range includes both wash and spray versions.

Directions for Use:

Spray on the area 3 – 4 times daily.

Presentation:

250ml Spray Bottle
500ml Spray Bottle
