

LIVER-X® Injection

Ingredients:

Acetyl-dl-methionine 200g/L

Action:

Methionine is a lipotropic and protecting substance as an essential amino acid. The methyl group protects against steatosis. Methionine is a precursor of cystine and also of bile acid. It can also acidify the urine.

Indications:

Liver-X® is an aid to liver function in all species.

Directions:

Slow intravenous or intramuscular injection.

Horses, cattle, sheep, and pigs: 10ml per 100kg bodyweight

Dogs: 10ml per 20kg bodyweight.

Cats: 1ml per kg bodyweight.

Precautions:

The intramuscular injection is sometimes painful. To avoid this sensitivity the estimated dose may be diluted to twice its volume with sterile water.

Registered pursuant to the ACVM Act
1997, No A10230

RESTRICTED VETERINARY MEDICINE
