

NABUDONE-P

Phenylbutazone injection

Description:

Nabudone-P is a clear sterile solution containing 200mg/ml Phenylbutazone Sodium.

Action:

Phenylbutazone is a non steroidal anti-inflammatory agent exerting analgesic, anti-pyretic and anti-rheumatic actions.

The action of Phenylbutazone is by inhibition of prostaglandin synthesis with the cyclo-oxygenase pathway.

Nabudone-P reduces inflammation, swelling and stops the generation of painful stimuli.

Indications:

Nabudone-P is indicated for the relief of painful inflammatory conditions associated with musculo-skeletal conditions in horses and dogs.

- Acute sprains of joints, tendons, ligaments.
- Acute arthritis
- Post castration swelling
- Controlling inflammation to wounds and contusions
- Bursitis
- Lameness
- Osteoarthritis
- Rheumatism

Precautions:

Nabudone-P is for I.V. use only.

This product may not be used in any animal producing or intended to produce food for human consumption.

Side Effects:

Occasionally there is a decrease in serum protein and an increase in the albumin/globulin ratio. In the event of inappetence, gastro-intestinal irritation, oedema or oral ulceration, discontinue treatment.

Toxic effects may occur on resuming medication after an interval of two weeks or more suggesting sensitisation; nausea or diarrhoea may occur.

Contra-Indications:

Hypertension; hepatic, cardiac or renal dysfunction, ulceration of the gastro-intestinal tract, blood dyscrasias. Do not administer in conjunction with other medication. Use with caution if animal has a history of drug sensitivity. Do not use in cats.
