

PINEDERM SHAMPOO

Pinederm Shampoo is a soap alternative shampoo specifically formulated for use as an adjunct to the medical treatment of pets with chronic dermatoses where pruritis is a feature (e.g. flea allergy dermatosis, atopy, seborrhoea). Pinederm has been developed specifically for animal treatment by a veterinarian.

Formulation:

Pinetar – 2%. Incorporated for its known antipruritic properties. Triethanolamine Lauryl Sulphate – a detergent and wetting agent with some bacteriostatic activity. Coconut diethanolamide – a detergent with a coconut oil base. Fluorescein – a water soluble dye.

Mode of Action:

Pinetar reduces pruritis and scaling. Coconut Diethanolamide helps replace oils lost from the skin during bathing. Triethanolamine Lauryl Sulphate assists the removal of accumulated dirt. Fluorescein acts as a water soluble dye marker to ensure that all shampoo is removed from the coat by thorough rinsing.

Directions for Use:

Correct application is essential for good results.

Pinederm is not to be used as an ointment or lotion.

Shake the bottle, wet the animal, apply shampoo and lather well, leave for 10 minutes, wash off thoroughly.

Presentation:

Available in 250ml, 500ml and 2litre bottles.
