

TrizEDTA

Description of Product:

533mg Tromethamine, 141mg Edetate Disodium Dihydrate, buffered to pH 8 with Tromethamine HCl as powder to be diluted in 118ml distilled water.

Indication:

Skin and coat care. For use in dogs and cats as a cleansing and/or alkanising agent.

Action:

Used as a pre-treatment wash, the slight raising of pH creates a more favourable environment for antibiotic action. EDA-tris chelates protein in bacterial cell walls, which is responsible for its antiseptic action and also enables easier penetration by antibiotics. It is also reputed to inactivate the efflux pump of some gram-negative bacteria thus further aiding subsequent antibiotic activity.

Precautions:

Use topically only, avoid contact with eyes.

Directions:

Fill bottle with 118ml of distilled water and shake well to create a solution with an approximate pH of 8. Allow to sit 1 hour before using. Apply liberally topically. Repeat as necessary or as directed by a veterinarian.

Storage:

Reconstituted solution is stable for up to 3 years.

This product is exempt from registration being an oral nutritional compound compliant with Schedule 4 of the ACVM regulations 2001.
